**Re: NOTICE OF INTENT TO SUE UNDER THE CLEAN WATER ACT AND
REQUEST FOR COPY OF STORMWATER POLLUTION PREVENTION PLAN**

Dear Managing Agent:

This letter is submitted on behalf of Columbia Riverkeeper, 111 Third Street, Hood River, OR 97031, (541) 387-3030. Any response or correspondence related to this matter should be directed to Brian A. Knutsen at the address provided below. This letter is to provide you with sixty days notice of Columbia Riverkeeper's intent to file a citizen suit against Steel Painters, Inc. ("Steel Painters") under section 505 of the Clean Water Act ("CWA"), 33 U.S.C. § 1365, for the violations described below. This letter is also a request for a copy of the complete and current stormwater pollution prevention plan ("SWPPP") required by Steel Painters' National Pollution Discharge Elimination System ("NPDES") permit.

Steel Painters was granted coverage under Washington's Industrial Stormwater General Permit ("ISGP") issued by the Washington Department of Ecology ("Ecology") on October 21, 2009, effective January 1, 2010, modified May 16, 2012, effective July 1, 2012, and expired on January 1, 2015, under NPDES Permit No. WAR-001871 (the "2010 Permit"). Steel Painters was granted coverage under the current iteration of the ISGP, issued by Ecology on December 3, 2014, effective January 2, 2015, and set to expire on December 31, 2019, (the "2015 Permit") and maintains the same permit number, WAR-001871.

Steel Painters has violated and continues to violate the terms and conditions of the 2010 Permit and 2015 Permit (collectively, the "Permits") with respect to operations of, and discharges of stormwater and pollutants from, its facility located at or near 1808 and 1819 Baker Way, Kelso, Washington (the "facility"). The facility subject to this notice includes any contiguous or adjacent properties owned or operated by Steel Painters.

I. COLUMBIA RIVERKEEPER'S COMMITMENT TO PROTECTING A FISHABLE AND SWIMMABLE COLUMBIA RIVER.

Columbia Riverkeeper's mission is to restore and protect the water quality of the Columbia River and all life connected to it, from the headwaters to the Pacific Ocean. Columbia Riverkeeper is a non-profit organization with members who live, recreate, and work throughout the Columbia River basin, including near and downstream of Steel Painters' facility.

Threats facing the Columbia River are severe by any measure. *See Columbia River Basin State of River Report for Toxics*, Environmental Protection Agency, Region 10 (January 2009), available online at: <http://yosemite.epa.gov/r10/ecocomm.nsf/Columbia/SoRR/>. In fact, the vast majority of rivers and streams in Washington fail to meet basic state water quality standards for pollutants such as toxics and temperature. *See State of Washington 303(d) List*, available online at: <http://www.ecy.wa.gov/programs/wq/303d/index.html>. Water quality standards are designed to protect designated uses, including aquatic life, fishing, swimming, and drinking water.

Stormwater runoff is "one of the great challenges of water pollution control" and "is a principal contributor to water quality impairment of waterbodies nationwide." *See Urban Stormwater Management in the United States*, National Research Council (Oct. 15, 2008), available online at: http://www.epa.gov/npdes/pubs/nrc_stormwaterreport.pdf. When rain sends runoff across city streets, construction projects, and industrial facilities, the water picks up contaminants that are drained into waterways such as the Columbia River and its tributaries. These toxics accumulate in local fish, wildlife, and birds. To address this leading cause of water quality impairment, Columbia Riverkeeper invests significant time and resources in reducing pollutant loads from industrial, municipal, and construction stormwater sources.

This Notice of Intent to Sue Steel Painters is part of Columbia Riverkeeper's effort to improve water quality in the Columbia River Basin for purposes including swimming, habitat quality, and subsistence, recreational, and commercial fishing. Columbia Riverkeeper has serious concerns about the impacts of Steel Painters' operations and industrial stormwater discharges on the Columbia River and its tributaries, including the Cowlitz and Willapa Rivers. As discussed below, Steel Painters has failed consistently to monitor stormwater pollution discharges, failed to complete and implement level response actions, and failed to adopt and implement a compliant SWPPP. Steel Painters' operations and stormwater discharges degrade water quality in the Columbia River Basin, including water quality in the Columbia, Cowlitz, and Willapa Rivers, and place the health and well-being of all who use the Columbia at risk.

II. COMPLIANCE WITH STANDARDS.

A. Violations of Water Quality Standards.

Condition S10.A of the Permits prohibit discharges that cause or contribute to violations of water quality standards. Water quality standards are the foundation of the CWA and Washington's efforts to protect clean water. In particular, water quality standards represent the U.S. Environmental Protection Agency ("EPA") and Ecology's determination, based on

scientific studies, of the thresholds at which pollution starts to cause significant adverse effects on fish or other beneficial uses. For each water body in Washington, Ecology designates the "beneficial uses" that must be protected through the adoption of water quality standards.

A discharger must comply with both narrative and numeric water quality standards. WAC 173-201A-010; WAC 173-201A-510 ("No waste discharge permit can be issued that causes or contributes to a violation of water quality criteria, except as provided for in this chapter."). Narrative water quality standards provide legal mandates that supplement the numeric standards. Furthermore, narrative water quality standards apply with equal force, even when Ecology has established numeric water quality standards. Specifically, Condition S10.A of the Permits require that Steel Painters' discharges not cause or contribute to violations of Washington State's water quality standards.

Steel Painters discharges stormwater to storm drains that discharges to a slough that discharges to the Coweeman River, which discharges to the Cowlitz River, which discharges to the Columbia River. Steel Painters discharges stormwater that contains elevated levels of zinc, turbidity, and lead as indicated in Table 1 below. Further, Steel Painters has a pattern and practice of failing to monitor stormwater pollution and analyze all pollution parameters. Discharges of stormwater from the facility cause and/or contribute to violations of water quality standards for zinc, lead, and aesthetic criteria and have occurred each and every day during the last five years on which there was 0.1 inch or more of precipitation, and continue to occur. These water quality standards include those set forth in WAC 173-201A-240, and -260(2). Precipitation data for the last five years are appended to this Notice of Intent to Sue and identify days when precipitation met or exceeded 0.1 inches per day.

4Q 2010	2	13.7	7.1	274	No	4.5	ND	NR

Note a: Table 1 lists benchmark levels established in the Permits. Values in bold indicate benchmark exceedances.

Note b: "ND" stands for "Non-Detect" and "NR" stands for "Not Reported." In some instances it was unclear from Ecology's records whether Steel Painters' recorded a sample as ND or NR. In these instances, Table 1 states "ND or NR."

Note c: For the 3rd Quarter 2010, Steel Painters filed DMRs for both sampling points. The DMRs stated "No Sample Collected – No Stormwater was discharged during normal working hours."

Note d: According to Ecology's public records, Sampling Point No. 1 is located "Behind the Paint Shop" and Sampling Point No. 2 is located at "Driveway Railco." The location of Sampling Point No. 3, which Steel Painters' reported in a 1st Quarter 2012 DMR, is unclear.

B. Compliance with Standards.

Condition S10.C of the Permits requires Steel Painters to apply all known and reasonable methods of prevention, control and treatment ("AKART") to all discharges, including preparing and implementing an adequate SWPPP and best management practices ("BMPs"). Steel Painters has violated and continues to violate these conditions by failing to apply AKART to its discharges by, among other things, failing to implement an adequate SWPPP and BMPs as evidenced by the elevated levels of pollutants in its discharge and the Ecology inspection reports. *See* Table 1; Section III. These violations have occurred on each and every day during the last five years and continue to occur every day.

Condition S1.A of the Permits require that all discharges and activities authorized be consistent with the terms and conditions of the permit. Steel Painters has violated this condition by discharging and acting inconsistent with the conditions of the Permits as described in this Notice of Intent to Sue.

III. STORMWATER POLLUTION PREVENTION PLAN VIOLATIONS.

Columbia Riverkeeper hereby provides notice, based upon information and belief, that Steel Painters has not developed and implemented a SWPPP that complies with the requirements of the Permits. Steel Painters' violations of the Permits, described herein, are evidence of Steel Painters' ongoing failure to prepare and implement a SWPPP that includes adequate BMPs and

that otherwise includes all of the required SWPPP components. In the following section, Columbia Riverkeeper provides notice of SWPPP violations on information and belief.

Condition S3.A.1 of the Permits require Steel Painters to develop and implement a SWPPP as specified in these permits. Condition S3.A.2 of the Permits require the SWPPP to specify BMPs necessary to provide AKART and ensure that discharges do not cause or contribute to violations of water quality standards. On information and belief, Steel Painters has violated these requirements of the Permits each and every day over the last five years and continues to violate them as it has failed to prepare and/or implement a SWPPP that includes AKART and BMPs necessary to comply with state water quality standards.

Condition S3.A of the Permits require Steel Painters to have and implement a SWPPP that is consistent with permit requirements, fully implemented as directed by permit conditions, and updated as necessary to maintain compliance with permit conditions. On information and belief, Steel Painters has violated these requirements of the Permits each and every day over the last five years and continues to violate them because its SWPPP is not consistent with permit requirements, is not fully implemented, and has not been updated as necessary.

The SWPPP fails to satisfy the requirements of Condition S3 of the Permits because it does not adequately describe BMPs. Condition S3.B.4 of the Permits requires that the SWPPP include a description of the BMPs that are necessary for the facility to eliminate or reduce the potential to contaminate stormwater. Condition S3.B.4 of the 2015 Permit requires that the SWPPP detail how and where the selected BMPs will be implemented. Condition S3.A.3 of the Permits requires that the SWPPP include BMPs consistent with approved stormwater technical manuals or document how stormwater BMPs included in the SWPPP are demonstratively equivalent to the practices contained in the approved stormwater technical manuals, including the proper selection, implementation, and maintenance of all applicable and appropriate BMPs. Steel Painters' SWPPP does not comply with these requirements because it does not adequately describe and explain in detail the BMPs selected, does not include BMPs consistent with approved stormwater technical manuals, and does not include BMPs that are demonstratively equivalent to such BMPs with documentation of BMP adequacy.

Steel Painters' SWPPP fails to satisfy the requirements of Condition S3.B.2 of the Permits because it fails to include a facility assessment. The SWPPP fails to include an adequate facility assessment because it does not describe the industrial activities conducted at the site, the general layout of the facility including buildings and storage of raw materials, the flow of goods and materials through the facility, the regular business hours, and the seasonal variations in business hours or in industrial activities.

Steel Painters' SWPPP fails to satisfy the requirements of Condition S3.B.1 of the Permits because it does not include a site map that identifies significant features, the stormwater drainage and discharge structures, the stormwater drainage areas for each stormwater discharge point off-site, a unique identifying number for each discharge point, each sampling location with a unique identifying number, paved areas and buildings, areas of pollutant contact associated with specific industrial activities, conditionally approved non-stormwater discharges, surface water locations, areas of existing and potential soil erosion, vehicle maintenance areas, and lands

and waters adjacent to the site that may be helpful in identifying discharge points or drainage routes.

Steel Painters' SWPPP fails to comply with Condition S3.B.2.b of the Permits because it does not include an inventory of industrial activities that identifies all areas associated with industrial activities that have been or may potentially be sources of pollutants. The SWPPP does not identify all areas associated with outdoor storage of materials or products, outdoor manufacturing and processing, onsite dust or particulate generating processes, on-site waste treatment, storage, or disposal, vehicle and equipment fueling, maintenance, and/or cleaning, roofs or other surfaces exposed to air emissions from a manufacturing building or a process area, and roofs or other surfaces composed of materials that may be mobilized by stormwater as required by these permit conditions.

Steel Painters' SWPPP does not comply with Condition S3.B.2.c of the Permits because it does not include an adequate inventory of materials. The SWPPP does not include an inventory of materials that lists the types of materials handled at the site that potentially may be exposed to precipitation or runoff and that could result in stormwater pollution, a short narrative for each material describing the potential for the pollutants to be present in stormwater discharge that is updated when data becomes available to verify the presence or absence of the pollutants, a narrative description of any potential sources of pollutants from past activities, materials and spills that were previously handled, treated, stored, or disposed of in a manner to allow ongoing exposure to stormwater as required. The SWPPP does not include the method and location of on-site storage or disposal of such materials and a list of significant spills and significant leaks of toxic or hazardous pollutants as these permit conditions require.

Steel Painters' SWPPP does not comply with Condition S3.B.3 of the Permits because it does not identify specific individuals by name or title whose responsibilities include SWPPP development, implementation, maintenance and modification.

Condition S3.B.4 of the Permits requires that permittees include in their SWPPPs and implement certain mandatory BMPs unless site conditions render the BMP unnecessary, infeasible, or an alternative and equally effective BMP are provided. Steel Painters is in violation of this requirement because it has failed to include in its SWPPP and implement the mandatory BMPs of the Permits.

Steel Painters' SWPPP does not comply with Condition S3.B.4.b.i of the Permits because it does not include required operational source control BMPs in the following categories: good housekeeping (including definition of ongoing maintenance and cleanup of areas that may contribute pollutants to stormwater discharges, and a schedule/frequency for each housekeeping task); preventive maintenance (including BMPs to inspect and maintain stormwater drainage and treatment facilities, source controls, treatment systems, and plant equipment and systems, and the schedule/frequency for each task); spill prevention and emergency cleanup plan (including BMPs to prevent spills that can contaminate stormwater, for material handling procedures, storage requirements, cleanup equipment and procedures, and spill logs); employee training (including an overview of what is in the SWPPP, how employees make a difference in complying with the SWPPP, spill response procedures, good housekeeping, maintenance

requirements, material management practices, how training will be conducted, the frequency/schedule of training, and a log of the dates on which specific employees received training); inspections and recordkeeping (including documentation of procedures to ensure compliance with permit requirements for inspections and recordkeeping, including identification of personnel who conduct inspections, provision of a tracking or follow-up procedure to ensure that a report is prepared and appropriate action taken in response to visual monitoring, definition of how Steel Painters will comply with signature and record retention requirements, certification of compliance with the SWPPP and Permit, and all inspection reports completed by Steel Painters).

Steel Painters' SWPPP does not comply with Condition S3.B.4.b.i.7 of the Permits because it does not include measures to identify and eliminate the discharge of process wastewater, domestic wastewater, noncontact cooling water, and other illicit discharges to stormwater sewers, or to surface waters and ground waters of the state.

Steel Painters' SWPPP does not comply with Condition S3.B.4.b.ii of the Permits because it does not include required structural source control BMPs to minimize the exposure of manufacturing, processing, and material storage areas to rain, snow, snowmelt, and runoff. Steel Painters' SWPPP does not comply with Condition S3.B.4.b.iii of the Permits because it does not include treatment BMPs as required.

Steel Painters' SWPPP fails to comply with Condition S3.B.4.b.v of the Permits because it does not include BMPs to prevent the erosion of soils or other earthen materials and prevent off-site sedimentation and violations of water quality standards.

Steel Painters' SWPPP fails to satisfy the requirements of Condition S3.B.5 of the Permits because it fails to include a stormwater sampling plan as required. The SWPPP does not include a sampling plan that identifies points of discharge to surface waters, storm sewers, or discrete ground water infiltration locations, documents why each discharge point is not sampled, identifies each sampling point by its unique identifying number, identifies staff responsible for conducting stormwater sampling, specifies procedures for sampling collection and handling, specifies procedures for sending samples to the a laboratory, identifies parameters for analysis, holding times and preservatives, laboratory quantization levels, and analytical methods, and that specifies the procedure for submitting the results to Ecology.

IV. MONITORING AND REPORTING VIOLATIONS.

A. Failure to Collect Quarterly Samples.

Condition S4.B of the Permits require Steel Painters to collect a sample of its stormwater discharge once during every calendar quarter. Conditions S3.B.5.b and S4.B.2.c of the Permits require Steel Painters to collect stormwater samples at each distinct point of discharge offsite except for substantially identical outfalls, in which case only one of the substantially identical outfalls must be sampled. These conditions set forth sample collection criteria, but require the collection of a sample even if the criteria cannot be met.

Steel Painters violated these requirements by failing to collect stormwater samples in compliance with the requirements during the following quarters for the following outfalls (*i.e.*, stormwater discharge monitoring points):

TABLE 2: STEEL PAINTERS' FAILURE TO COLLECT QUARTERLY SAMPLES

Sampling Point	Quarter
1	1st Quarter 2011
2	1st Quarter 2011
1	2nd Quarter 2011
2	2nd Quarter 2011
1	3rd Quarter 2011
2	3rd Quarter 2011
1	1st Quarter 2012
1	3rd Quarter 2012
2	3rd Quarter 2012
1	4th Quarter 2013
2	4th Quarter 2013
1	3rd Quarter 2014
2	3rd Quarter 2014

Steel Painters has violated and continues to violate these conditions because it does not sample each distinct point of discharge off-site each quarter. These violations have occurred and continue to occur each and every quarter over the last five years that Steel Painters was and is required to sample its stormwater discharges, including the quarters in which it collected stormwater discharge samples from some, but not all, points of discharge. These violations will continue until Steel Painters commences monitoring all distinct points of discharge.

B. Failure to Analyze Quarterly Samples.

Conditions S5.A.1 and S5.B of the Permits requires Steel Painters to analyze stormwater samples collected quarterly for turbidity, pH, total copper, total zinc, oil sheen, lead, and petroleum hydrocarbons. Steel Painters violated these conditions by failing to analyze stormwater samples for the required parameters during the quarters listed in Table 1 as "NR" ("Not Reported") or "ND or NR" ("Non-Detect" or "Not Reported").

C. Failure to Timely Submit Discharge Monitoring Reports.

Condition S9.A of the Permits require Steel Painters to use DMR forms provided or approved by Ecology to summarize, report and submit monitoring data to Ecology. For each monitoring period (calendar quarter) a DMR must be completed and submitted to Ecology not later than 45 days after the end of the monitoring period. Steel Painters has violated these conditions by failing to submit a DMR within the time prescribed for the following quarters:

**TABLE 3: STEEL PAINTERS' FAILURE TO
SUBMIT DMRs WITHIN THE DEADLINES
PROSCRIBED BY PERMIT**

Sampling Point	Quarter
1	1st Quarter 2011
2	1st Quarter 2011
1	2nd Quarter 2011
2	2nd Quarter 2011
1	3rd Quarter 2011
2	3rd Quarter 2011
1	1st Quarter 2012
1	3rd Quarter 2012
2	3rd Quarter 2012
1	4th Quarter 2013
2	4th Quarter 2013

D. Failure to Comply with Visual Monitoring Requirements.

Condition S7.A of the Permits requires that monthly visual inspections be conducted at the facility by qualified personnel. Each inspection is to include observations made at stormwater sampling locations and areas where stormwater associated with industrial activity is discharged, observations for the presence of floating materials, visible oil sheen, discoloration, turbidity, odor, etc. in the stormwater discharges, observations for the presence of illicit discharges, a verification that the descriptions of potential pollutant sources required by the permit are accurate, a verification that the site map in the SWPPP reflects current conditions, and an assessment of all BMPs that have been implemented (noting the effectiveness of the BMPs inspected, the locations of BMPs that need maintenance, the reason maintenance is needed and a schedule for maintenance, and locations where additional or different BMPs are needed).

Condition S7.C of the Permits requires that Steel Painters record the results of each inspection in an inspection report or checklist that is maintained on-site and that documents the observations, verifications, and assessments required. The report/checklist must include the time and date of the inspection, the locations inspected, a statement that, in the judgment of the person conducting the inspection and the responsible corporate officer, the facility is either in compliance or out of compliance with the SWPPP and the Permit, a summary report and schedule of implementation of the remedial actions that Steel Painters plans to take if the site inspection indicates that the facility is out of compliance, the name, title, signature and certification of the person conducting the facility inspection, and a certification and signature of the responsible corporate officer or a duly authorized representative.

Steel Painters is in violation of these requirements of Condition S7 of the Permits because, during the last five years, it has failed to conduct each of the requisite visual monitoring and inspections, failed to prepare and maintain the requisite inspection reports or checklists, and failed to make the requisite certifications and summaries.

V. CORRECTIVE ACTION VIOLATIONS.

A. Violations of the Level One Requirements of the Permits.

Condition S8.B of the Permits requires Steel Painters take specified actions, called a "Level One Corrective Action," each time quarterly stormwater sample results exceed a benchmark value or are outside the benchmark range for pH. Condition S8.A of the 2015 Permit requires that Steel Painters implement any Level One Corrective Action required by the 2010 Permit.

As described by Condition S8.B of the Permits, a Level One Corrective Action requires that Steel Painters: (1) review the SWPPP for the facility and ensure that it fully complies with Condition S3 of the 2010 Permit and contains the correct BMPs from the applicable Stormwater Management Manual; (2) make appropriate revisions to the SWPPP to include additional operational source control BMPs with the goal of achieving the applicable benchmark values in future discharges and sign and certify the revised SWPPP in accordance with Condition S3.A.6 of the 2010 Permit; and (3) summarize the Level One Corrective Action in the Annual Report required under Condition S9.B of the Permits. Condition S8.B.4 of the Permits requires that Steel Painters implement the revised SWPPP as soon as possible, and no later than the DMR due date for the quarter the benchmark was exceeded.

Conditions S5.A and S5.B of the Permits establish the following applicable benchmarks: turbidity 25 NTU; pH 5 – 9 SU; total copper 14 µg/L; total zinc 117 µg/L; total lead 81.6 µg/L; petroleum hydrocarbons (diesel fraction) 10 mg/L.

Steel Painters has violated the requirements of the Permits described above by failing to conduct a Level One Corrective Action in accordance with permit conditions, including the required review, revision and certification of the SWPPP, the required implementation of additional BMPs, and the required summarization in the annual report each time during the last five years that quarterly stormwater sampling results were greater than a benchmark or outside the benchmark range for pH, including the benchmark excursions listed in Table 1 in Section II.A. of this letter.

These benchmark excursions are based upon information currently available to Columbia Riverkeeper from Ecology's publicly available records. Columbia Riverkeeper provides notice of its intent to sue Steel Painters for failing to comply with all of the Level One Corrective Action requirements described above by failing to conduct a Level One Corrective Action in accordance with permit conditions, including the required review, revision and certification of the SWPPP, the required implementation of additional BMPs, and the required summarization in the annual report each time during the last five year that its quarterly stormwater sampling results were greater than a benchmark or outside the benchmark range for pH, including the benchmark excursions listed in Table 1 above.

B. Violations of the Level Two Requirements of the Permits.

Condition S8.C of the Permits requires Steel Painters to take specified actions, called a "Level Two Corrective Action," each time quarterly stormwater sample results exceed an applicable benchmark value or are outside the benchmark range for pH for any two quarters during a calendar year. Condition S8.A of the 2015 Permit requires that Steel Painters implement any Level Two Corrective Action required by the 2010 Permit.

As described by Condition S8.C of the Permits, a Level Two Corrective Action requires Steel Painters: (1) review the SWPPP for the facility and ensure that it fully complies with Condition S3 of the 2010 Permit; (2) make appropriate revisions to the SWPPP to include additional structural source control BMPs with the goal of achieving the applicable benchmark value(s) in future discharges and sign and certify the revised SWPPP in accordance with Condition S3 of the Permits; and (3) summarize the Level Two Corrective Action (planned or taken) in the Annual Report required under Condition S9.B of the Permits. Condition S8.C.4 of the Permits requires that Steel Painters implement the revised SWPPP according to Condition S3 of the Permits and the applicable stormwater management manual as soon as possible, and no later than August 31st of the following year.

The Permits establishes the benchmarks applicable to Steel Painters described in Section V.A of this Notice of Intent to Sue.

Steel Painters has violated the requirements of the Permits described above by failing to conduct a Level Two Corrective Action in accordance with permit conditions, including the required review, revision and certification of the SWPPP, the required implementation of additional BMPs to ensure that all points of discharge from the facility meet benchmarks (not just the sampled point of discharge), including additional structural source control BMPs, and the required summarization in the annual report each time during the last five years its quarterly stormwater sampling results were greater than a benchmark or outside the benchmark range for pH for any two quarters during a calendar year. As indicated in Table 1 in Section II.A of this letter, these violations include, but are not limited to, Steel Painters' failure to fulfill these obligations for zinc triggered by its stormwater sampling during the calendar year of 2013.

The benchmark excursions identified in Table 1 of this Notice of Intent to Sue are based upon information currently available to Columbia Riverkeeper from Ecology's publicly available records. Columbia Riverkeeper provides notice of its intent to sue Steel Painters for failing to comply with all of the Level Two Corrective Action requirements each and every time quarterly stormwater sample results exceeded an applicable benchmark value or were outside the benchmark range for pH for any two quarters during a calendar year, including any such excursions that are not reflected in Table 1 above, during the last five years.

C. Violations of the Level Three Requirements of the Permits.

Condition S8.D of the Permits requires Steel Painters take specified actions, called a "Level Three Corrective Action," each time quarterly stormwater sample results exceed an applicable benchmark value or are outside the benchmark range for pH for any three quarters

during a calendar year. Condition S8.A of the 2015 Permit requires that Steel Painters implement any Level Three Corrective Action required by the 2010 Permit.

As described by Condition S8.D of the 2010 Permit, a Level Three Corrective Action requires that Steel Painters: (1) review the SWPPP for the facility and ensure that it fully complies with Condition S3 of the 2010 Permit; (2) make appropriate revisions to the SWPPP to include additional treatment BMPs with the goal of achieving the applicable benchmark value(s) in future discharges and additional operational and/or structural source control BMPs if necessary for proper function and maintenance of treatment BMPs, and sign and certify the revised SWPPP in accordance with Condition S3.A.6 of the 2010 Permit; and (3) summarize the Level Three Corrective Action (planned or taken) in the Annual Report required under Condition S9.B of the 2010 Permit, including information on how monitoring, assessment, or evaluation information was (or will be) used to determine whether existing treatment BMPs will be modified/enhanced, or if new/additional treatment BMPs will be installed. Condition S8.D.2.b of the 2010 Permit requires that a licensed professional engineer, geologist, hydrogeologist, or certified professional in storm water quality must design and stamp the portion of the SWPPP that addresses stormwater treatment structures or processes.

Condition S8.D.3 of the 2010 Permit requires that, before installing BMPs that require the site-specific design or sizing of structures, equipment, or processes to collect, convey, treat, reclaim, or dispose of industrial stormwater, Steel Painters submit an engineering report, plans, and specifications, and an operations and maintenance manual to Ecology for review in accordance with chapter 173-204 of the Washington Administrative Code. The engineering report must be submitted no later than the May 15 prior to the Level Three Corrective Action Deadline. The plans and specifications and the operations and maintenance manual must be submitted to Ecology at least 30 days before construction/installation.

Condition S8.D.5 of the 2010 Permit requires that Steel Painters fully implement the revised SWPPP according to Condition S3 of the 2010 Permit and the applicable stormwater management manual as soon as possible, and no later than September 30th of the following year.

The Permits establishes the benchmarks applicable to Steel Painters described in Section V.A of this Notice of Intent to Sue.

Steel Painters has violated the requirements of the Permits described above by failing to conduct a Level Three Corrective Action in accordance with permit conditions, including the required review, revision and certification of the SWPPP, including the requirement to have a specified professional design and stamp the portion of the SWPPP pertaining to treatment, the required implementation of additional BMPs, including additional treatment BMPs to ensure that all points of discharge from the facility meet benchmarks (not just the sampled point of discharge), the required submission of an engineering report, plans, specifications, and an operations and maintenance plan, and the required summarization in the annual report each time during the last five years its quarterly stormwater sampling results were greater than a benchmark or outside the benchmark range for pH for any three quarters during a calendar year. As indicated in Table 1 in Section II.A of this letter, these violations include, but are not limited

to, Steel Painters' failure to fulfill these obligations for zinc triggered by its stormwater sampling during calendar years 2010, 2012, and 2014.

The benchmark excursions identified in Table 1 of this Notice of Intent to Sue are based upon information currently available to Columbia Riverkeeper from Ecology's publicly available records. Columbia Riverkeeper provides notice of its intent to sue Steel Painters for failing to comply with all of the Level Three Corrective Action requirements each and every time quarterly stormwater sample results exceeded an applicable benchmark value or were outside the benchmark range for pH for any three quarters during a calendar year, including any such excursions that are not reflected in Table 1 above, during the last five years.

VI. VIOLATIONS OF THE ANNUAL REPORT REQUIREMENTS.

Condition S9.B of the Permits requires Steel Painters to submit an accurate and complete annual report to Ecology no later than May 15 of each year. The annual report must include corrective action documentation as required in Condition S8.B through S8.D. If a corrective action is not yet completed at the time of submission of the annual report, Steel Painters must describe the status of any outstanding corrective action. Specific information to be included in the annual report is identification of the conditions triggering the need for corrective action, description of the problem and identification of dates discovered, summary of any Level 1, 2, or 3 corrective actions completed during the previous calendar year, including the dates corrective actions completed, and description of the status of any Level 2 or 3 corrective actions triggered during the previous calendar year, including identification of the date Steel Painters expects to complete corrective actions. Steel Painters has violated this condition by failing to include all of the required information in the annual reports it submitted for 2010, 2011, 2012, 2013, and 2014. Steel Painters also violated Condition S9.B by failing to submit the annual reports for 2010 and 2012 by the May 15 deadline.

The annual report submitted by Steel Painters for 2010 (date stamped November 28, 2011) does not include all required information. For example, the report does not describe conditions triggering the Level Three Corrective Action for zinc, the problems and the dates they were discovered, or an adequate summary of the corrective actions taken (the report vaguely refers to installation of "a drain/filtration system" to be completed in the "fall of 2011"). The annual report does not include any of the required information for the Level One Corrective Action triggered for turbidity in the first quarter of 2010.

The annual report submitted by Steel Painters for 2011 (dated April 11, 2012) does not include all required information. For example, the report does not include a summary of the Level Three Corrective Action for zinc that was to be completed in 2011 (*i.e.*, the Level Three Corrective Action triggered in 2010). Instead, the report describes plans to install a Stormwater Rx treatment system that was to be operational by the fall of 2012, without any explanation as to whether this is in addition to or in lieu of the drain/filtration system described in the 2010 annual report. Further, the report does not describe conditions triggering the Level One Corrective Action for zinc triggered in 2011, the problems and the dates they were discovered, or a complete summary of the corrective actions taken.

The annual report submitted by Steel Painters for 2012 (dated July 7, 2013) does not include all required information. For example, the report does not describe conditions triggering the Level Three Corrective Action for zinc, or the problems and the dates they were discovered. The report does not describe what additional treatment will be installed as part of the Level Three Corrective Action or when it will be installed, but instead vaguely refers to an ongoing process to install treatment. The report also does not include a summary of the corrective measures that were to be completed in 2012; specifically, the Stormwater Rx system that was described in the 2011 annual report.

The annual report submitted by Steel Painters for 2013 (dated February 10, 2014) does not include the required information. For example, the annual report does not adequately describe the status of the Level Three Corrective Action for zinc triggered in 2012 that was to be completed in 2013 (the report vaguely describes the status of the Level Three Corrective Action as "planning" and represents that it will be completed by "summer 2014"). Further, the annual report fails to describe any potential or actual stormwater pollution problem(s) identified during the previous calendar year. The report does not describe conditions triggering the Level Two Corrective Action for zinc, the problems and the dates they were discovered, or include an adequate summary of the corrective actions taken. The report does not include any of the required information for the Level One Corrective Action triggered for lead in 2013.

The annual report submitted by Steel Painters for 2014 (dated May 15, 2015) does not include the required information. For example, the annual report does not describe the status of the Level Three Corrective Action that Steel Painters previously indicated would be completed by "summer 2014." Instead, the report again vaguely represents that Steel Painters in "in the planning, development stage" for "treatment options."

VII. VIOLATIONS OF THE RECORDKEEPING REQUIREMENTS.

A. Failure to Record Information.

Condition S4.B.3 of the Permits requires Steel Painters record and retain specified information for each stormwater sample taken, including the sample date and time, a notation describing if Steel Painters collected the sample within the first 30 minutes of stormwater discharge event, an explanation of why Steel Painters could not collect a sample within the first 30 minutes of a stormwater discharge event, the sample location, method of sampling and of preservation, and the individual performing the sampling. Upon information and belief, Steel Painters is in violation of these conditions as it has not recorded each of these specified items for each sample taken during the last five years.

B. Failure to Retain Records.

Condition S9.C of the Permits requires Steel Painters to retain for a minimum of five years a copy of the Permits, a copy of Steel Painters' permit coverage letters, records of all sampling information, inspection reports including required documentation, any other documentation of compliance with permit requirements, all equipment calibration records, all BMP maintenance records, all original recordings for continuous sampling instrumentation,

copies of all laboratory results, copies of all required reports, and records of all data used to complete the application for the Permits. Upon information and belief, Steel Painters is in violation of these conditions because it has failed to retain records of such information, reports, and other documentation during the last five years.

VIII. REQUEST FOR SWPPP.

Pursuant to Condition S9.F of the 2015 Permit, Columbia Riverkeeper hereby requests that Steel Painters provide a copy of, or access to, its SWPPP complete with all incorporated plans, monitoring reports, checklists, and training and inspection logs. The copy of the SWPPP and any other communications about this request should be directed to the undersigned at the letterhead address.

Should Steel Painters fail to provide the requested complete copy of, or access to, its SWPPP as required by Condition S9.F of the 2015 Permit, it will be in violation of that condition, which violation shall also be subject to this Notice of Intent to Sue and any ensuing lawsuit.

IX. PARTY GIVING NOTICE OF INTENT TO SUE.

The full name, address, and telephone number of the party giving notice is:

Columbia Riverkeeper
111 Third St.
Hood River, OR 97031
(541) 387-3030

X. ATTORNEYS REPRESENTING RIVERKEEPER.

The attorneys representing Columbia Riverkeeper in this matter are:

Brian A. Knutsen
Kampmeier & Knutsen, PLLC
833 S.E. Main Street
Suite 327; Mail Box 318
Portland, Oregon 97214
(503) 913-7632
brian@kampmeierknutsen.com

Lauren Goldberg, Staff Attorney
Columbia Riverkeeper
111 Third St.
Hood River, OR 97031
(541) 965-0985
(Licensed in Oregon)

XI. CONCLUSION.

The above-described violations reflect those indicated by the information currently available to Columbia Riverkeeper. These violations are ongoing. Columbia Riverkeeper intends to sue for all violations, including those yet to be uncovered and those committed after the date of this Notice of Intent to Sue.

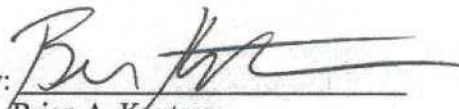

Under Section 309(d) of the CWA, 33 U.S.C. § 1319(d), each of the above-described violations subjects the violator to a penalty of up to \$37,500 per day for each violation. In addition to civil penalties, Columbia Riverkeeper will seek injunctive relief to prevent further violations under Sections 505(a) and (d) of the CWA, 33 U.S.C. § 1365(a) and (d), and such other relief as is permitted by law. Also, Section 505(d) of the CWA, 33 USC § 1365(d), permits prevailing parties to recover costs, including attorney's fees.

Columbia Riverkeeper believes that this NOTICE OF INTENT TO SUE sufficiently states grounds for filing suit. Columbia Riverkeeper intends, at the close of the 60-day notice period, or shortly thereafter, to file a citizen suit against Steel Painters under Section 505(a) of the Clean Water Act for the violations described herein.

Columbia Riverkeeper is willing to discuss effective remedies for the violations described in this letter and settlement terms during the 60-day notice period. If you wish to pursue such discussions in the absence of litigation, we suggest that you initiate those discussions within ten (10) days of receiving this notice so that a meeting can be arranged and so that negotiations may be completed promptly. We do not intend to delay the filing of a complaint if discussions are continuing when the notice period ends.

Very truly yours,

KAMPMEIER & KNUTSEN, PLLC
